Background

SLC38A1 (Sodium-coupled neutral amino acid transporter 1), is also named as SNAT1, which is a symporter that cotransports short-chain neutral amino acids and sodium ions from the extraccellular to the intracellular side of the cell membrane. Inhibition of SLC38A1 reduced tumor growth, cellular migration, invasion, and induced senescence in melanoma cells. SLC38A1 was identified as a positive regulator of mTORC1 in neurons, which promoted ischemic brain damage by mTOR-autophagy system. SLC38A1 is mainly expressed in brain and placenta.

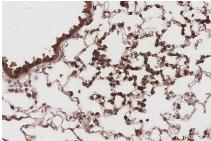

Synonyms

Amino acid transporter A1, ATA1, NAT2, N-system amino acid transporter 2, SAT1
