Background

ACADL(Long-chain specific acyl-CoA dehydrogenase, mitochondrial) is also named as LCAD and belongs to the acyl-CoA dehydrogenase family. It catalyzes the first reaction of the mitochondrial β -oxidation of fatty acids and is synthesized in the cytosol as a precursor that is larger than its mature form. Defects in ACADL are a cause of acyl-CoA dehydrogenase very long-chain deficiency (ACADVLD).

Synonyms

ACAD4, EC:1.3.8.8, LCAD, Long-chain specific acyl-CoA dehydrogenase, mitochondrial
