Background

The PPP2R2B gene encodes a deduced 443-amino acid protein, which is a brain-specific regulatory subunit B of protein phosphatase 2. PPP2R2B is a Subunit of PP2A, a highly conserved constitutive enzyme. PPP2R2B (B β) is an important regulator of protein phosphatase 2A (PP2A) activity in the brain. Through differential promoter usage and alternative splicing, two major isoforms B β 1 and B β 2 with divergent sub-cellular targeting N termini are produced. B β plays an important role in neuronal survival. It has 5 isoforms produced by alternative splicing. Primary antibody in this kit has cross-reactivity to PPP2R2A, PPP2R2C and PPP2R2D.
