Background Information	CD47, also known as integrin-associated protein (IAP), is a member of the immunoglobulin superfamily containing a five-pass transmembrane attachment. CD47 is heavily glycosylated and widely expressed by hematopoietic and nonhematopoietic cells. CD47 interacts with several membrane integrins and also acts as a receptor for thrombospondin (THBS1). It is involved in a range of cellular processes, including apoptosis, proliferation, adhesion and migration. CD47 also functions as a ligand for signal regulatory protein-a (SIRPa). Upon binding CD47, SIRPa initiates a signaling cascade that results in the inhibition of phagocytosis.
