

IHC Detect Kit for Mouse Primary Antibody

Catalog Number: PK10010

Description

The PK10010 kit is designed to facilitate signal detection during IHC analysis of FFPE tissue samples using primary antibodies raised in mice. The kit consists of Polymer HRP-Goat anti-Mouse Secondary Antibody and an ultra-sensitive Chromogen for highly sensitive detection of mouse primary antibodies. The kit also contains an optimized primary antibody dilution buffer that preserves primary antibody activity and helps lower non-specific background staining.

Note:

* If antigen retrieval buffer, counter staining reagent and mounting media are needed, please see our IHC Prep & Detect Kit for Mouse Primary Antibody (Cat.NO. [PK10018](#)).
